

Exceptional Control

Healon GV

1.4% sodium hyaluronate

**Highest molecular weight
cohesive OVD for superb control**

*“HEALON GV OVD creates space for a well-controlled capsulorhexis and is easily removed at the end of the case without compromising the anterior chamber. Additionally, the efficiency of the **ELLIPS FX** technology gives me the confidence to use a greater viscosity OVD for my cases due to reduced power during phaco.”*

Provides Exceptional Control

Healon GV

1.4% sodium hyaluronate

HEALON GV OVD deepens the anterior chamber and flattens the anterior capsule.

- High viscosity for increased **anterior chamber expansion** and space maintenance
- **Highest molecular weight** of any OVD in the **HEALON®** family of OVDs
- Expands anterior chamber and flattens anterior capsule to **facilitate capsulorhexis**
- Long molecular chain designed for **easy removal**

For all your patients, choose **HEALON®**.
Complete coverage. Complete protection.
From one complete family.

HEALON 5®

HEALON®

HEALON® EndoCoat

HEALON GV®

- The industry standard in reliability
- Always latex-free for patient and staff safety

Four choices. One complete **HEALON®** family.
